

Interpret the data and aggregate the self-study findings

The next step is to interpret the aggregated data from the self-study. Specific elements of the self-study findings will include:

- a. establishing a working set of program aims;
- b. listing key program strengths;
- c. prioritizing among the self-identified areas for improvement to select those for active follow-up, and define the specific improvement activities;
- d. discussing opportunities that may enhance the program, and develop plans to take advantage of them; and,
- e. discussing threats identified in the self-study, and develop plans to mitigate their impact.
