Dental Diagnostic Sciences Admissions Requirements

- DDS or DMD degrees from USA or Canada are preferred. All others will be considered and are encouraged to apply
- Minimum of 1 year experience in general practice residency or in general practice is required
- Deadline to apply: November 1st of each year for the following year’s matriculating class. Application materials include:
  - Completed application
  - Three letters of recommendation
  - Original transcripts from all the schools attended. In addition, international applicants must have transcripts evaluated by evaluation firms such as ECE or WES including GPA calculations. All transcripts and evaluation reports must be received prior to application deadline
  - GRE and TOEFL scores are required for international applicants.
  - GRE scores are mandatory for the Master’s program and must be received prior to the application deadline
  - National board scores, if available

Dental Diagnostic Sciences Degree Requirements

- Certificate program – completion of 30 months
- Master’s program – completion of 36 months

Dental Diagnostic Sciences Objectives/Program Outcomes:

- Provide comprehensive training that assures resident knowledge and proficiency in Oral and Maxillofacial Radiology through extensive training in radiation physics, radiation biology, radiographic techniques and interpretation, anatomy of the head and neck and diagnostic imaging interpretation of the maxillofacial region using conventional and advanced radiographic procedures such as CT, Cone Beam CT, and magnetic resonance images acquired in the graduate clinic or in assigned courses.

- Prepare the residents to successfully challenge the Oral and Maxillofacial Radiology board exams and become certified Radiologists.

Dental Diagnostic Sciences Program Policies

Policy on Probation and Dismissal

An advanced education student may be placed on academic probation for reasons of substandard performance in didactic, clinical, behavioral or professional/ethical areas. A student whose overall grade point average falls below B (3.0) or who receives a final grade of D, F or U for any course during any one grading period will be considered for a recommendation of academic probation by the departmental Residency Oversight Committee of the appropriate program. A recommendation for probation will be made to the Advanced Education Committee’s (AEC) Graduate Program Directors Subcommittee, which is comprised of the Program Directors of all the Advanced Education Programs in the Dental School and the Associate Dean for Student Affairs. Only the Program Directors will be voting members of this Subcommittee; the Associate Dean for Student Affairs will serve in an ex officio capacity as a non-voting member. In addition, the departmental Residency Oversight Committee may recommend to the AEC’s Graduate Program Directors Subcommittee that a student be placed on academic probation for clinical, behavioral or professional/ethical performance that does not meet the standards of the program. The AEC’s Graduate Program Directors Subcommittee will formally place the student on academic probation upon majority vote of the members.

A student placed on academic probation will be given written notification by the Chair of the Advanced Education Committee of such status. This notification will serve as an official warning to the student that her or his didactic, clinical, behavioral and/or professional/ethical performance is below standard and continuation in the postgraduate program is in jeopardy. The student will be allowed an opportunity to correct the substandard performance that led to academic probation status over a probationary time period determined by the departmental Residency Oversight Committee. At subsequent monthly AEC meetings, the Program Director of the affected residency will report to the AEC on the status of the probated student's progress. Upon the student’s successful correction of performance deficiencies, he or she will be removed from academic probation. If the reason for academic probation was a GPA below 3.0, the student will remain on probation for as long as her or his cumulative GPA is below 3.0. While on probation, a student must maintain a B average in those courses for which he or she is registered or be considered for dismissal recommendation by the departmental Residency Oversight Committee. A recommendation to remove the student from academic probation will be made by the departmental Residency Oversight Committee to the AEC’s Graduate Program Directors Subcommittee, which will remove academic probation status upon majority vote on the members.

If the substandard performance that led to academic probation is not corrected, the student will be subject to dismissal from the program. A recommendation for dismissal will be made by the departmental Residency Oversight Committee to the AEC’s Graduate Program Directors Subcommittee. The AEC’s Graduate Program Directors Subcommittee will consider the recommendation for dismissal and will formally dismiss the student from the program upon majority vote of the members. A student will be subject to dismissal actions without a probationary period if he or she receives a final grade of D or F for 4 (four) or more credit hours of required course work during a single grading period.

During academic probation and dismissal actions, the student may address the AEC Graduate Program Directors Subcommittee in writing or may request permission to appear before the Subcommittee to present her or his views. The Advanced Education Committee will transmit recommendations for dismissal through the Associate Dean for Student Affairs to the Dean. Students may appeal academic dismissal to the Dental Dean. Procedural appeal may be made to the President in accordance with Health Science Center policy.
DIAG Courses

DIAG 5007. Graduate OMR Clinic. 3 Credit Hours.
The Graduate Radiology Clinic is in operation five full days per week. Services include intra- and extra-oral radiography, panoramic, cephalometric, linear, and multi-directional tomography; sialography; arthrography; CT image processing; and planned CT image acquisition.

DIAG 5009. Introduction To Dental Radiology. 1 Credit Hour.
This course provides students with an opportunity to learn the special terminology associated with dental radiography in addition to theoretical principles of intraoral radiography. Students will have the opportunity to develop preclinical technical skills in placing, exposing, processing, and mounting dental radiographs using a technique mannequin (DXTTR), and as technology permits, preliminary experiences using digital imaging technology and the photostimulable phosphor system (PSP). Students will also have the opportunity to gain preliminary experience in the assessment of radiographs for normal anatomic structures, radiographic technique errors, caries, periodontal disease, and other common dental anomalies.

DIAG 5009. Introduction To Dental Radiology. 1 Credit Hour.
This course is an introduction to the principles and practices of radiology report writing. It will include sections on software utilization, report writing, implant diagnosis and reporting, TMJ diagnosis and reporting. In addition, student will be mentored by upperclassmen on the mechanics of operating the radiological devices owned and operated by the graduate OMR clinic.

DIAG 5012. Introduction To Graduate Clinic. 1 Credit Hour.
This course is an introduction to the principles and practices of radiology report writing. It will include sections on software utilization, report writing, implant diagnosis and reporting, TMJ diagnosis and reporting. In addition, student will be mentored by upperclassmen on the mechanics of operating the radiological devices owned and operated by the graduate OMR clinic.

DIAG 5014. Physical Evaluation 1. 1.5 Credit Hour.
This course is intended to afford students maximal opportunity to recognize the relevance of basic biomedical sciences to the study of the patient and to provide the fabric for the accumulation of knowledge, skills, and values essential to initiate the clinical process. It includes didactic and clinical experience in obtaining and interpreting a patient history; extraoral and intraoral physical examination procedures; and interpretation of the findings of the examination.

DIAG 5015. Panoramic Radiology. 1 Credit Hour.
This lecture course includes topics such as the principles of panoramic radiology, concepts of panoramic image formation, review of anatomic structures, clinical techniques, and recognition and correction of panoramic errors. Also, the uses and limitations of panoramic radiology as well as digital panoramic radiology will be discussed. The goal is to achieve competency in this subject matter. Proficiency will be achieved during clinical rotations in panoramic radiology as part of the graduate OMR clinic experience.

DIAG 5016. Head & Neck Anatomy. 1 Credit Hour.
This review course is designed to provide the resident with the opportunity to acquire an anatomical foundation for oral and maxillofacial radiology. The course uses interactive computer-based head and neck clinical anatomy software as well as digital libraries of radiographic and cross-sectional anatomical specimens. Numerous Internet- based references are also used to provide the student with the most up-to-date and graphic information. Clinical anatomic information is correlated with plain film, CT, and MRI images to provide a contextual reference between clinical and radiographic anatomy. Written and oral examinations are given to assess competency in this area.

DIAG 5017. Literature Review. 1 Credit Hour.
Each week a topic in Oral and Maxillofacial radiology is discussed. In addition, students receive a block of instruction in evidence-based literature evaluation. At each session a student leader presents from 2-4 papers that meet the current topic. Articles are approved by the course director beforehand for scientific accuracy, validity, and relevance. Students are expected to read the articles before the session and participate in the group discussion. Discussion is facilitated by a question and response format led by the course director. Literature from past reviews is filed for student reference.

DIAG 5018. Practicum In Oral Medicine. 4 Credit Hours.
Practice in clinical skills required for diagnosis, management, and treatment of oral and perioral diseases, including such special procedures as sialography, cytological smearing, biopsy, and culture taking is offered. A comprehensive review of the conditions that the dentist may be called upon to diagnose and treat as the result of the physical examination of the patient is the focus of this course. Topics include extraoral findings such as general appearance of the hands, eyes, ears, nose and neck; intraoral findings such as lesions as in lip swelling or palatal swelling; and color changes, surface changes, and other problems such as pain and functional disorders.

DIAG 5019. Digital Imaging. 1 Credit Hour.
This survey course is designed to give the maxillofacial radiology resident the opportunity to gain a basic understanding of digital imaging. The course utilizes classroom lectures as well as computer laboratory exercises to demonstrate the application of digital imaging in a clinical setting. The course covers all aspects of digital imaging including: fundamental basis for digital imaging, image enhancement and restoration, image
analysis, image compression, image synthesis, and image display. The course also covers specific information related to digital imaging modalities such as computed tomography, magnetic resonance imaging, ultrasound, and dental digital radiography.

**DIAG 5026. Diagnostic Imaging Of The Jaws Part 1. 2 Credit Hours.**
The goal of this class is to achieve competency regarding the interpretation of plain and advanced images of hard and soft tissue conditions affecting the teeth, jaws, and surrounding structures of the maxillofacial complex including, but not limited to, the paranasal sinuses, salivary glands, and trauma. The material is presented and repeated through three basic formats: by pattern recognition, by disease process, and as further analyzed using contrast studies, CT, MR, nuclear scans, and ultrasound images where applicable. This course builds on [DIAG 5027 Advanced Radiation Physics](#). Students will be given the opportunity to perform laboratory assignments designed to further their understanding of the practical applications of the principles of advanced radiation physics.

**DIAG 5027. Advanced Radiation Physics. 1 Credit Hour.**
This course presents the advanced principles of radiation physics as they apply to medical and dental diagnostic radiology. Topics include the nature and production of X-rays, interactions of X-rays with matter, the physics of films and intensifying screens, the nature of the radiographic image, fundamentals of radiation protection, principles of tomography, and panoramic radiography.

**DIAG 5028. Advanced Radiation Physics Lab. 0.5 Credit Hours.**
This laboratory is given in conjunction with [DIAG 5027 Advanced Radiation Physics](#). Students will be given the opportunity to perform laboratory assignments designed to further their understanding of the practical applications of the principles of advanced radiation physics.

**DIAG 5026. Diagnostic Imaging of the Jaws Part 1. 2 Credit Hours.**
The goal of this class is to achieve competency regarding the interpretation of plain and advanced images of hard and soft tissue conditions affecting the teeth, jaws, and surrounding structures of the maxillofacial complex including, but not limited to, the paranasal sinuses, salivary glands, and trauma. The material is presented and repeated through three basic formats: by pattern recognition, by disease process, and as further analyzed using contrast studies, CT, MR, nuclear scans, and ultrasound images where applicable. This course builds on [DIAG 5027 Advanced Radiation Physics](#). Students will be given the opportunity to perform laboratory assignments designed to further their understanding of the practical applications of the principles of advanced radiation physics.

**DIAG 5036. Diagnostic Imaging of Jaws Pt. 2. 2 Credit Hours.**
This course builds on [DIAG 5026 Diagnostic Imaging of the Jaws Part 1](#). The goal of this class is to achieve competency regarding the interpretation of plain and advanced images of hard and soft tissue conditions affecting the teeth, jaws, and surrounding structures of the maxillofacial complex including, but not limited to, the paranasal sinuses, salivary glands, and trauma. The material is presented and repeated through three basic formats: by pattern recognition, by disease process, and as further analyzed using contrast studies, CT, MR, nuclear scans, and ultrasound images where applicable. This course builds on [DIAG 5027 Advanced Radiation Physics](#). Students will be given the opportunity to perform laboratory assignments designed to further their understanding of the practical applications of the principles of advanced radiation physics.

**DIAG 5037. Oral And Maxillofacial Radiology Interpretation 1. 1 Credit Hour.**
The overall purpose of this course is to provide students with learning experiences that will give them the opportunity to develop proficiency in OMR image analysis and interpretation. This course meets in one-hour sessions with a seminar or grand rounds format. Each week, students receive cases and are requested to generate a written report and present the case to other students and faculty. Cases include a variety of diagnoses that comprise the field of oral and maxillofacial radiology including both typical and unusual examples. Additionally, high-quality, properly exposed images are supplied. Many examples include plain film, CT, and MR for the same case. Additional cases include other imaging modalities such as tomograms, contrast studies, and nuclear scans. In some instances, glass slides and a microscope are used to correlate histological features with MR images, an activity much requested by students. Imaging particular to salivary gland disease and TMJ disorders will also be emphasized. Students will record these cases in a special section of their logbook and may, circumstances permitting, copy the cases for future reference or teaching. The course director's collection of cases is one of the most extensive and is broadly representative and thus guarantees the student exposure to a variety of clinical cases which cannot be assured through the various clinical experiences during the time frame of the program.

**DIAG 5040. Basic Principles Of Oral And Maxillofacial Imaging. 2 Credit Hours.**
This is a didactic and clinical course aimed at providing oral and maxillofacial radiology residents with basic knowledge of oral and maxillofacial radiographic anatomy and helps the residents develop proficiency in routine and special OMF imaging procedures. The course consists of a complete review of plain film techniques used in OMF radiography and hands-on imaging exercises with radiographic phantoms. The radiographic anatomy displayed on these projections will be reviewed in lecture and exercise format using the practice phantom films and radiographic anatomy review sets. Bone anatomy and organ-based anatomy will be reviewed.

**DIAG 5044. Radiation Physics Lab. 0.5 Credit Hours.**
This laboratory is given in conjunction with [DIAG 5045 Radiation Physics](#). Students will be given the opportunity to perform laboratory assignments designed to further their understanding of the practical applications of the principles of radiation physics.

**DIAG 5045. Radiation Physics. 1 Credit Hour.**
This introductory course presents the fundamental principles of radiation physics as they apply to medical and dental diagnostic radiology. Topics include the nature and production of X-rays, interactions of X-rays with matter, the physics of films and intensifying screens, the nature of the radiographic image, fundamentals of radiation protection, principles of tomography, and panoramic radiography.

**DIAG 5049. Practical Infection Control. 1 Credit Hour.**
This course provides students with an opportunity to learn the special terminology associated with dental radiography in addition to theoretical principles of intraoral radiography. Students will have the opportunity to develop preclinical technical skills in placing, exposing, processing, and mounting dental radiographs using a technique mannequin (DXTTR), and as technology permits, preliminary experiences using digital imaging technology and the photostimulable phosphor system (PSP). Students will also have the opportunity to gain preliminary experience in the assessment of radiographs for normal anatomic structures, radiographic technique errors, caries, periodontal disease, and other common dental anomalies.

**DIAG 5050. Fundamentals of Dental Radiography. 1 Credit Hour.**
This lecture course reviews the basics of diagnostic radiography and introduces the latest techniques. Review includes sessions on exposure factors, projection techniques, film processing, and radiation protection. The major extraoral technique stressed in the course is panoramic radiography, including normal anatomy, technique errors, and interpretation. Skull projections are reviewed and basic principles and indications of special techniques such as xeroradiography, CT, nuclear medicine, and others are presented as time allows.

**DIAG 5070. Supervised Teaching. 1 Credit Hour.**
Graduate students are assigned to the various clinics, laboratories, and classes for the opportunity to acquire experience in teaching undergraduate students in a variety of situations. Supervision and evaluation of teaching performance is provided by the graduate faculty.

**DIAG 5091. Case Conference. 1 Credit Hour.**
This course meets weekly and serves as a venue for students to plan and present their cases to other students and faculty, and supply follow-up information where feasible.

**DIAG 5092. Diag Science Seminar. 1 Credit Hour.**
The format of this course includes presentations, reviews, and discussions of current cases from the Dental Diagnostic Science Clinic as well as cases of interest from the teaching file.

**DIAG 5093. Diag Science Seminar. 1 Credit Hour.**
The format of this course includes presentations, reviews, and discussions of current cases from the Dental Diagnostic Science Clinic as well as cases of interest from the teaching file.

**DIAG 5181. Principles Forensic Odontology. 1 Credit Hour.**
A didactic course covering such topics as forensic photography, forensic radiology, dental identification, mass disaster techniques, bite mark analysis, child abuse, and courtroom protocol. Students will be encouraged to investigate specific areas in more detail. (This course is an elective for the MS degree.).

**DIAG 6005. Clinical Path Conference. 1 Credit Hour.**
Formal review of clinical, radiographic, and histopathologic presentations of various conditions affecting the head and neck area and the oral cavity, in particular, is presented. A variety of cases are presented for group discussion with a view toward obtaining a differential diagnosis.

**DIAG 6007. Graduate Oral And Maxillofacial Clinic. 3 Credit Hours.**
The Graduate Radiology Clinic is in operation five full days per week. Services include intra- and extra-oral radiography, panoramic, cephalometric, linear, and multi-directional tomography; sialography; arthrography; CT image processing; and planned CT image acquisition.

**DIAG 6008. Orofacial Pain. 2 Credit Hours.**
This course is designed to introduce the student to the field of orofacial pain. The course objectives include: introduction to orofacial pain, assessment of orofacial pain disorders, diagnostic classification of orofacial pain disorders, differential diagnosis and management of vascular intracranial disorders, differential diagnosis and management of neuralgias, nerve trunk pain and deafferentation pain, differential diagnosis and management of intraoral pain, differential diagnosis and management of temporomandibular disorders, and differential diagnosis and management of mental disorders.

**DIAG 6009. Noninfectious Diseases/Oral Mucosa. 2 Credit Hours.**
This course is designed to discuss a selected group of diseases of the oral mucosa with the primary purpose of presenting diagnostic and therapeutic guidelines. The role of oral medicine specialists in the care of noninfectious oral mucosal diseases, appropriate (e.g., timely and accurate) consultations/referral, definitive therapy, clinical review (e.g., the disease and/or side-effects of theory), disease prevention, and counseling of patients and relatives will be discussed.

**DIAG 6011. Clinical Medicine. 2 Credit Hours.**
Today's clinician must treat more medically and pharmacologically compromised patients than ever before. It is axiomatic that they must have a
The goal of this course is to achieve competency regarding the interpretation of plain and advanced images of hard- and soft-tissue conditions affecting the teeth, jaws and surrounding structures of the maxillofacial complex including, but not limited to, the paranasal sinuses, salivary glands, and trauma. The material is presented and repeated through three basic formats: by pattern recognition, by disease process, and as further analyzed using contrast students, CT, MR, nuclear scans and ultrasound images where applicable. This course forms the basis for more advanced coursework in diagnosis and management of oral and maxillofacial conditions.

DIAG 6016. Pharmacotherapeutics. 1 Credit Hour.
This course is designed to review general principles of pharmacology; current and accepted pharmacotherapy for the medical management of pain, infection, and selected systemic diseases; and associated adverse drug events. It is based on the top 200 drugs dispensed by U.S. community pharmacies for the prevention, diagnosis, and/or treatment of disease with special reference to dentistry.

DIAG 6017. Literature Review. 1 Credit Hour.
Each week a topic in Oral and Maxillofacial radiology is discussed. In addition, students receive a block of instruction in evidence-based literature evaluation. At each session, a student leader presents from 2-4 papers that meet the current topic. Articles are approved beforehand by the course director, for scientific accuracy, validity, and relevance. Students are expected to read the articles before the session and participate in the group discussion. Discussion is facilitated by a question and response format led by the course director. Literature from past reviews is filed for student reference.

DIAG 6018. OMR Case Conference. 1 Credit Hour.
This course meets weekly and serves as a venue for students to plan and present their cases to other students and faculty, and supply follow-up information where feasible.

DIAG 6019. Chemosensory Disorders/Salivary Gland Dysfunctions. 2 Credit Hours.
Chemosensory disorders affect in particular disproportionately a large segment of the elderly population, the fastest growing segment of the western industrialized nation. Also saliva plays a major role in the preservation and protection of the oral and pharyngeal tissues. When salivary gland function is altered, multiple stomatologic and systemic disorders can develop. This graduate level elective course is designed to make the graduate student (oral medicine) aware of the etiology, prevalence and mechanisms of normal and diseased chemosensation and salivary gland functions of the oral cavity. Its focus will be on the diagnosis and management of patients with taste, smell and salivary gland dysfunctions.

DIAG 6020. Tumor Board. 1 Credit Hour.
The class meets for one hour once a week at the MARC building and is sponsored by the Department of Otolaryngology and Head and Neck Surgery. Students will have the opportunity to learn case management and prognosis of patients with oral and maxillofacial and head and neck tumors, exposure to the diagnostic imaging work-up of the patients presented, interact with attending medical and dental specialists, attend special seminars related to tumor board, and have an opportunity to interact with various medical residents for further learning opportunities. Students are expected to share some of their learning experiences and present cases during case conferences to other OMR program venues such as graduate clinic.

DIAG 6021. Medical Radiology Rotation. 2 Credit Hours.
Medical radiology training occurs within the dental school using image-acquired data from a medical clinic. It also occurs in the University Hospital, at Wilford Hall Medical Center at nearby Lackland Air Force Base, and in a private radiology clinic. Cases using advanced imaging are available in the program director's extensive collection to further enhance medical radiology training. A minimum of 7.5 semester credit hours are required. Each student must enroll in a minimum of three one-month rotations.

DIAG 6022. Practicum In Oral Medicine. 6 Credit Hours.
Practice in clinical skills required for diagnosis, management, and treatment of oral and perioral diseases, including such special procedures as sialography, cytological smearing, biopsy, and culture taking is offered. The focus of this course is a comprehensive review of the conditions that the dentist may be called upon to diagnose and treat as the result of the physical examination of the patient. Topics include extracoronal findings such as general appearance of the hands, eyes, ears, nose and neck; intraoral findings such as lesions in lip swelling or palatal swelling; and color changes, surface changes, and other problems such as pain and functional disorders.

DIAG 6025. Diagnostic Imaging Of The Head And Neck Pt. I. 2 Credit Hours.
The goal of this course is to achieve competency regarding the interpretation of plain and advanced images of hard- and soft-tissue conditions affecting the teeth, jaws and surrounding structures of the maxillofacial complex including, but not limited to, the paranasal sinuses, salivary glands, and trauma. The material is presented and repeated through three basic formats: by pattern recognition, by disease process, and as further analyzed using contrast students, CT, MR, nuclear scans and ultrasound images where applicable. This course forms the basis for more advanced coursework in diagnosis and management of oral and maxillofacial conditions.
advanced seminar and clinical courses through which proficiency is required to be achieved.

**DIAG 6027. Advanced Imaging Technology. 2 Credit Hours.**
This course is a continuation of the Radiation Physics courses that are given during the first year of graduate studies. This course will provide the student with the opportunity to achieve a proficiency level understanding of the physical principles of all the advanced imaging methods and techniques (i.e., computed tomography), magnetic resonance imaging, ultrasound and radionuclide imaging commonly used in medical care, and understanding of the clinical applications of these advanced imaging modalities.

**DIAG 6035. Physical Evaluation 2. 1.5 Credit Hour.**
The importance of an accurate diagnosis and patient evaluation upon which to base a rational treatment plan is the emphasis of this course. Lectures on types of clinical exams, chief complaint, and clinical and medical history are presented. Study of the normal appearance and presentation of abnormalities and disease as they relate to various areas of the oral cavity is also included, with special emphasis on the soft tissues. Methodology in diagnosis includes case history, general and oral clinical laboratory, and other supplementary examinations. The rationale of when to prescribe dental radiographs is presented. Factors affecting treatment plans, with emphasis on medical compromises, are also presented.

**DIAG 6041. Basic Radiation Biology. 1 Credit Hour.**
An introductory course in the basic concepts of radiation biology, this course is appropriate for dentists desiring an opportunity to gain additional knowledge of the biological effects of diagnostic and therapeutic levels of x-radiation. Concepts of designing an office for optimum radiation protection also are presented.

**DIAG 6043. Advanced Radiation Biology. 1 Credit Hour.**
An in-depth study of radiation biology is presented, emphasizing such topics as radiation risk, dosimetry, theories of radiation damage, radiation hygiene and protection, and the effects of therapeutic levels of radiation on the oral tissues.

**DIAG 6045. American Board of OM Radiology Preparation. 2 Credit Hours.**
The purpose of this course is to prepared 3rd year oral and maxillofacial radiology residents for taking the American Board of Oral and Maxillofacial Radiology exam and gives an overview of exam expectations. The format of the course will reflect the same formatting and style of the National board examination: an oral and a written examination dealing with radiation physics, radiation biology and protection, and imaging techniques. The student will interpret various images and write radiographic reports for a number of cases.

**DIAG 6049. Oral And Maxillofacial Radiology Interpretation 2. 1 Credit Hour.**
The overall purpose of this course is to provide students with learning experiences that will give them the opportunity to develop proficiency in OMR image analysis and interpretation. This course meets in one-hour sessions with a seminar or grand rounds format. Each week, students receive cases and are requested to generate a written report and present the case to other students and faculty. Cases include a variety of diagnoses that comprise the field of oral and maxillofacial radiology including both typical and unusual examples. Additionally, high-quality, properly exposed images are supplied. Many examples include plain film, CT, and MR for the same case. Additional cases include other imaging modalities such as tomograms, contrast studies, and nuclear scans. In some instances, glass slides and a microscope are used to correlate histological features with MR images, an activity much requested by students. Imaging particular to salivary gland disease and TMJ disorders will also be emphasized. Students will record these cases in a special section of their logbook and may, circumstances permitting, copy the cases for future reference or teaching. The course director's collection of cases is one of the most extensive and is broadly representative and thus guarantees the student exposure to a variety of clinical cases which cannot be assured through the various clinical experiences during the time frame of the program.

**DIAG 6051. Oral And Maxillofacial Radiology Interpretation 3. 1 Credit Hour.**
The overall purpose of this course is to provide students with learning experiences that will give them the opportunity to develop proficiency in OMR image analysis and interpretation. Students receive cases and are requested to generate a written report and present the case to other students and faculty. Cases include a variety of diagnoses that comprise the field of oral and maxillofacial radiology including both typical and unusual examples. Additionally, high-quality, properly exposed images are supplied. Many examples include plain film, CT, and MR for the same case. Additional cases include other imaging modalities such as tomograms, contrast studies, and nuclear scans. In some instances, glass slides and a microscope are used to correlate histological features with MR images, an activity much requested by students. Imaging particular to salivary gland disease and TMJ disorders will also be emphasized. Students will record these cases in a special section of their logbook and may, circumstances permitting, copy the cases for future reference or teaching. The course director's collection of cases is one of the most extensive and is broadly representative and thus guarantees the student exposure to a variety of clinical cases which cannot be assured through the various clinical experiences during the time frame of the program.
**DIAG 6068. Diagnostic Imaging Of The Head And Neck Pt. 2. 2 Credit Hours.**
This course builds on DIAG 6025 Diagnostic Imaging of the Head and Neck Part 1. The goal of this course is to achieve competency regarding the interpretation of plain and advanced images of hard- and soft-tissue conditions affecting the teeth, jaws, and surrounding structures of the maxillofacial complex including, but not limited to, the paranasal sinuses, salivary glands, and trauma. The material is presented and repeated through three basic formats: by pattern recognition, by disease process, and as further analyzed using contrast studies, CT, MR, nuclear scans, and ultrasound images where applicable. This course forms the basis for more advanced seminar and clinical courses through which proficiency is required to be achieved.

**DIAG 6071. Supervised Teaching. 1 Credit Hour.**
Graduate students are assigned to the various clinics, laboratories, and classes for the opportunity to acquire experience in teaching undergraduate students in a variety of situations. Supervision and evaluation of teaching performance are provided by the graduate faculty.

**DIAG 6083. Forensic Odontology Lab. 1 Credit Hour.**
Demonstration and application of information and principles are presented in this introductory course in laboratories of the Health Science Center and the Bexar County Medical Examiner's Office. Successful completion of DIAG 5181 Principles in Forensic Odontology and this course will fulfill requirements for membership in the American Academy of Forensic Sciences.

**DIAG 6091. Diagnostic Science Seminar. 1 Credit Hour.**
The format of this course includes presentations, reviews, and discussions of current cases from the Dental Diagnostic Science Clinic as well as cases of interest from the teaching file.

**DIAG 6097. Research. 1.5 Credit Hour.**
This course consists of independent, original research under the direction of a faculty member.

**DIAG 6098. Thesis. 1.5 Credit Hour.**
Completion of an acceptable thesis is required for the Master of Science degree. Registration in this course for at least one semester is required of all degree candidates.

**DIAG 6132. Dental Radiology 1. 1 Credit Hour.**
This course offers didactic instruction in fundamental concepts of dental radiology and builds on information learned in DIAG 5009. Instructional content covers radiation physics, x-ray unit components and their function in creating a diagnostic image, radiation biology, radiation hygiene, film and image formation, digital imaging concepts, quality assurance, evaluation of panoramic radiographic errors, and recognition of conventional film processing errors.

**DIAG 6135. Clinical Case Conference. 1 Credit Hour.**
Each student will be assigned one or more cases to cover in a written report and to present in conference. Over two semesters, weekly conferences will allow for a large variety of representative pathoses to be reviewed and discussed. Students will have the opportunity to correlate the historical, clinical, and radiographic findings in the formation of a differential diagnosis or a diagnostic impression.

**DIAG 7036. Radiographic Interpretation. 1 Credit Hour.**
This is a comprehensive didactic course in dental radiologic interpretation of diseases of the jaws including differential radiological diagnosis of developmental abnormalities and pathological lesions of the teeth and jaws.

**DIAG 7052. Geriatrics. 1.5 Credit Hour.**
Lectures and seminars emphasizing dental management of the geriatric patient cover such topics as normal aging, treatment planning, pharmacologic considerations, management and communication techniques, dementias, dentistry for nursing home and homebound elderly, and clinical care.

**DIAG 7055. Oral Medicine. 2 Credit Hours.**
Lectures, demonstrations, and visual aids present the fundamentals of diagnosis and treatment in general medicine and surgery as they relate to dentistry. Students have the opportunity to demonstrate skill in physical diagnosis in laboratory sessions.
