

Enterprise Research Management System (ERMS)

ERMS-Animal Ops Module is LIVE!

The new ERMS – Animal Ops (AOps) tab is live as of September 1, 2026. The integration of this application is the final component of the Enterprise Research Management System (ERMS) suite. The addition of the AOps tab completes the one-stop-shop dashboard for all UT Health SA animal research information and processes. AOps provides direct access to Department of Laboratory Animal Resources (DLAR) animal-based research services and billing data on a per-protocol basis. This includes veterinary technical support, animal imports, exports and protocol-to-protocol transfers, cage census monitoring and protocol-specific billing details.

Resources to support the use of ERMS-Animal Ops include:
